That's a dangerous prospect, as creosote is highly flammable, which can lead to chimney fires.

Creosote also can block the flow of air through a chimney, and that can trap gasses, including CO, in a home.

REVERSE YOUR FANS

It's a simple step but one people may not even realize they can make.

In homes with ceiling fans, residents can reverse the fans so the blades spin clockwise.

This simple step pushes trapped warm air hovering around the ceiling into the living space below.

This can make home interiors warmer without requiring residents to turn up the thermostat and increase their energy bill.

REPLACE YOUR HVAC AIR FILTER

Replacing the air filter on your HVAC prior to winter can make the unit operate more efficiently, which can help reduce your wintertime energy bill.

Replacing the filter prior to winter also improves indoor air quality, which is a notable benefit during a time of year when the windows typically remain closed for months.

Winterizing a home is not a significant undertaking, but it can be very effective at making homes healthier and more comfortable once windows are closed for the season.
